### ABSTRACT

This study aims to examine the collocation of the word "weather" to Bekasi City which appears in the bold news media TribunBekasi.com from January 2023 to March 2023 using a corpus linguistics approach. The main goal is to prove the negative issues that some netizens have done regarding the weather in Bekasi City so that they become the object of ridicule by netizens. Based on the data collected, the word "weather" in Bekasi City ranks 15th. As a result, the entry "weather" is the dominant entry in the TribunBekasi.com media news articles. Evidenced by the number of occurrences of 96 times and is ranked 15th. Overall, there are 96 occurrences of the word "weather" from the corpus. From the news articles collected, we can find out the synonyms or collocations of the word "weather". Apart from that, we can also find out the weather conditions in Bekasi City, for example sunny, cloudy, rainy, bad, and light.

## INTRODUCTION

Bekasi City is one of the large cities in West Java Province. This city is one of the buffer cities for the capital city of Jakarta. Bekasi was recorded as part of Batavia or Jakarta from the 16th century until the mid-1950s (Sopandi, 2014). This city, nicknamed Patriot City, is part of Jabodetabek and is a satellite city of the capital city of Jakarta. This city is slowly developing into a residential choice for urbanites and industrial areas. In the early 2014s, the city of Bekasi was a "monthly topic" and was included in the trending topic on social media. Since then, the popularity of the city nicknamed Patriot City has skyrocketed after it became the subject of ridicule and jokes by netizens.

Apart from the various jokes and teasing or more accurately called "bullying", Bekasi has another side. There are several interesting facts about Bekasi City. First, Bekasi is in a geographically strategic location. Second, Bekasi City is inhabited by many Jakarta urbanites. Of the total area, more than half of the Bekasi City area has become an effective urban area. Third, Bekasi accommodates industry to support the national economy.

Fourth, Bekasi has middle to upper properties. Many integrated residential areas were built by national scale developers, namely Gunas Land, Sumarecon, Agung Sedayu, Lippo, PP, to Adhi Karya, and others. Fifth, Bekasi has good facilities for education. The international standard Victory Plus School has long been improving the quality of education in Bekasi. In fact, Bina Nusantara (Binus) collaborated with Vida Bekasi to establish Binus International School, starting from kindergarten to high school level. Sixth, Bekasi has the opportunity to attract investors. There is no closed place for investors who want to enter Bekasi. Many industries are interested in investing in this increasingly crowded place. Bekasi is a very good support for the capital city.

In this way, retail there is developing rapidly, and there are still many advantages that Bekasi City has that cannot be mentioned one by one. This gives an idea that this city is not just any city and is not a slum, poor and plebeian city. Thus, ridicule is not deserved if given to this City of Patriots.

## METHODOLOGY

The method that will be used in this research is a mixed method. Mixed methods or mix-methods are research methods that combine qualitative and quantitative methods (Naridah & Zari, 2022; Purwono, et al., 2019; Lutfiah, 2021; Pitaloka, 2021; Sulistyono & Wiradimadja, 2019; Monica & Yaswinda, 2021). The qualitative method in this research was carried out by interviews. The data comes from the news media TribunBekasi.com from January 2021 to February 2023. The research data is in the form of the names of sub-districts in Bekasi taken from online media news articles. News articles were obtained from seven TribunBekasi.com sections (politics, health, sports, education, religion, tourism, celebrities and automotive). Data processing is carried out using a corpus linguistics approach because this technique is able to collect written and oral material into a large corpus, making it easier to carry out further analysis. The steps for the data collection and processing technique are as follows, Collecting all the articles needed and converting them into txt format, Entering the data in .txt form into the AntConc software to get a list of frequency determinations of stains, the stains obtained are roads, and kingdom. From these stains, a collocation list was then created to get the names of sub-districts in Bekasi. The next step was to reduce the data, namely selecting relevant data that would be looked at for research (Sudaryanto, 2015: 294). The list of names of sub-districts that have been obtained is then selected again by searching in PERMENDAGRI No. 137 concerning Government Administrative Area Codes and Data, After the relevant data is obtained, data analysis is then carried out using the following steps, Carrying out collocation and concordance analysis. The range taken is L2 (two words to send) and R2 (two words to the right ) to find out the function of the road, whether it is related to the economy, social culture, settlements and so on, carry out road classification based on the functions found. Then calculate the percentage of street name classification for generalization, presenting the analysis results in tabular form.

## RESULTS AND DISCUSSIONS

Based on data collected into a corpus, the term "weather" ranks 15th in the list of the highest frequency of word use on TribunBekasi.com media. The following is a list of frequencies derived from the corpus:

**Table 1**  
Frequency of Use of Most Words in TribunBekasi.com Media

From the table above, we can see that the entry "weather" is the entry that dominates TribunBekasi.com media news articles. Proven by the number of appearances 96 times and being in 15th place.

StepThe next step is to look at the concordance of the "weather" entry to reduce the initial data. Some of the collocations "weather" are not relevant to the research because they appear as task words and nouns (example: at, hit, and at). The following is an example of a concordance list with path lemmas:

**Table 2.**
